

## 10. Material - Capturing unprotected piece

It's a move, when a pawn or piece captures the opponent's chessman on the board. The capturing piece then occupies the square of the captured piece. It is always preferred to capture the hanging piece first. (hanging piece is a piece that is unprotected and can be captured)

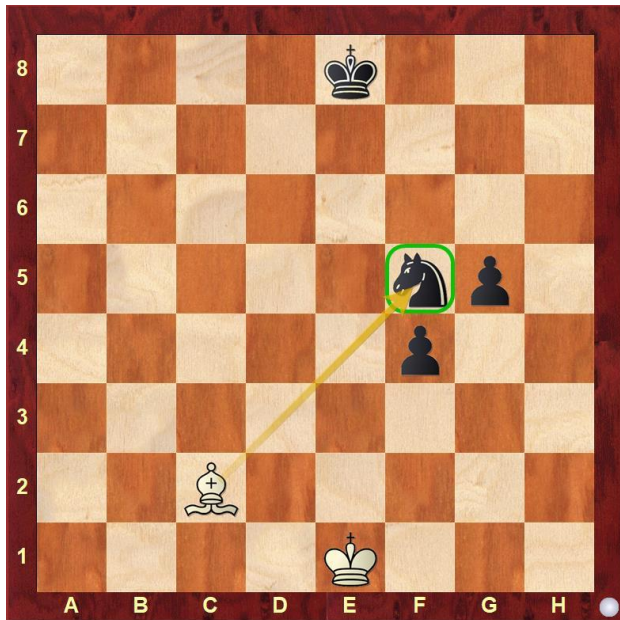

Diagram 10.1

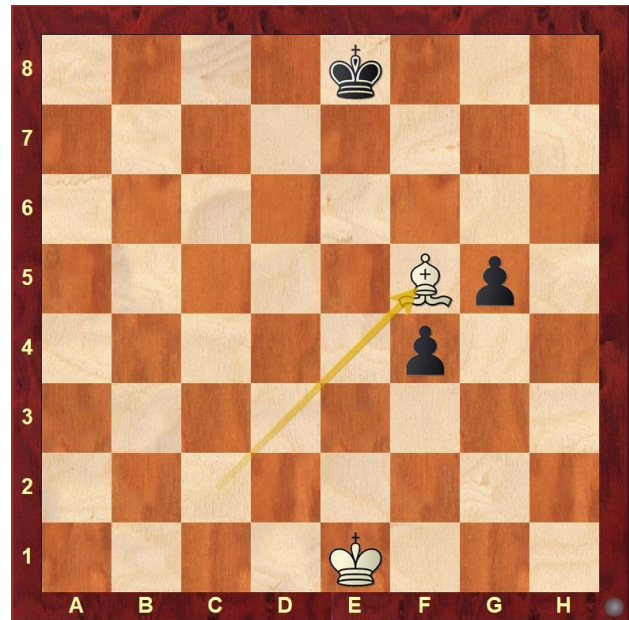

Diagram 10.2

In the diagram 10.1, we can observe that White Bishop at c2 is attacking the unprotected knight on f5. In diagram 10.2, the White Bishop at c2 captured the unprotected knight on f5.
